Summary

Passionate software engineer specializing in cross-platform Flutter development, Azure and Google cloud architecture, and intelligent IoT systems. Experienced leading full-stack initiatives from concept to production, unifying mobile, cloud, and hardware systems into cohesive user experiences. Known for rebuilding Sub-Zero Group's flagship Owner's App from the ground up in Flutter—raising its rating from 1 star to over 4.5 stars, and for developing award-winning AI tools recognized by Microsoft's Azure AI Developer Hackathon.

Strong record of technical innovation, design excellence, and hands-on execution across mobile, backend, and embedded systems.

Experience

Sub-Zero Group, Inc. — Madison, WI

Senior Software Engineer, Mobile, Cloud, and IoT Systems

May 2022 – Present

- Architected and rebuilt the Sub-Zero Group Owner's App from the ground up in Flutter, unifying two legacy native apps (Android + iOS) into a single modern cross-platform codebase.
 - Delivered complete redesign and rewrite between mid-2022 and early-2023.
 - App rating increased from 1 star to 4.5 stars, reflecting significant customer satisfaction gains.
 - Enabled dramatically faster feature development and deliver cycles.
 - Achieved sustained month-over-month growth in both total and active users, with nearly every month since launch setting a new all-time record.
- Led full-stack development of the company's new Recipe Experience (2025): conceived and prototyped the concept, designed the UX, built the Flutter front end, and implemented the Azure backend (Functions + Cosmos DB).
 - Built internal content management tools for recipes, plus reporting dashboards tracking engagement and performance.

- Drove end-to-end vision, from feature ideation through data analytics—establishing a repeatable model for full-stack innovation.
- Worked closely with legal teams on patentability and freedom to operate analyses.
- Developed BLE communication plugins to connect appliances with the mobile app using *flutter_splendid_ble*, published as an open-source Flutter package.
- Collaborated cross-functionally with design, hardware, and product teams to align connected-appliance UX with brand and user expectations.

Independent Developer & Technical Writer

2019 – Present

- Authored 60+ in-depth articles on Flutter, Firebase, and Azure architecture, among other miscellaneous topics, on Medium, reaching tens of thousands of readers and influencing best practices in modern Flutter app development.
- Created and published open-source libraries and tools, including:
 - *flutter_splendid_ble* — advanced BLE plugin for Flutter, used in commercial and research projects.
 - *splendid_cli* — command-line tool for Flutter project scaffolding and automation.
- Winner – 2025 Azure AI Developer Hackathon (Microsoft / DevPost) for Copper, an AI-powered tool assisting hardware engineers in debugging printed circuit board designs.
 - Built the complete web platform with Flutter, Azure Functions, and Cosmos DB.
 - Interfaced with Open AI LLM models via Azure AI Services.
 - Developed a KiCad file parser that transforms PCB data for LLM-based analysis, generating actionable feedback via a custom dashboard interface.

Education

Bachelor of Science in Information Science and Technology

University of Wisconsin, Milwaukee

Graduated: July 2015

My academic efforts towards earning my degree in information science and technology combined computer science, programming, communication, and information architecture coursework.

Awards and Recognition

- Winner — Azure AI Developer Hackathon 2025 (Microsoft / DevPost)
- Sub-Zero Group Owner's App Rating Improvement: 1 star → 4.5 stars
- 60+ Technical Articles Published — Medium (Flutter, Firebase, Azure, AI)

Selected Open-Source Projects

Flutter Splendid BLE — Advanced BLE communication package for Flutter Splendid CLI — Flutter project automation and scaffolding tool
Copper — AI-assisted PCB analysis platform (Azure Functions, Cosmos DB, LLM integration)
Brine — Predictive IoT cooking probe and mobile app (Flutter, Firebase, thermal modeling)
Dwellware — Agentic AI household app orchestration (Google Cloud Run, MCP architecture)
